## Symbio Liquid Aeration

An inorganic source of oxygen for improved growth and the alleviation of anaerobic conditions.

N 22% (w/w) (28% w/v), P 0%, K 0.3% (K₂O 0.35%)

- ✓ Eliminates anaerobic black layer
- Combats the effects of squidge, water logging and compaction.
- Encourages the breakdown of thatch.
- Substitutes physical aeration in wet conditions.
- Increases the uptake of applied nutrients for rapid growth.
- Encourages healthy microbial activity in the rootzone.
- Reduces nutrient leaching from the growing media.

5L

### **Recommended Application**

1-5 Litres per hectare dissolved in 400-600L Water

Symbio Liquid Aeration is a blend of complex components that contain a high number of atoms of oxygen for every molecule of product. When diluted and sprayed over turf, these atoms of oxygen penetrate the root zone to oxidise toxic compounds, as well as becoming available for use by the plant and soil microbes, encouraging normal aerobic activity in the rootzone.

Symbio Liquid Aeration may be tank – mixed with microbial products and most inorganic and organic nutrients.

Do not mix with fungicides.

Always test mixes before adding to spray tank

If the anaerobic layer is deep in the root zone, the best results will be obtained by tining to the anaerobic layer before spraying to allow the liquid to penetrate quickly. Store between 5 - 30°C

#### Hazard

Causes skin irritation Causes serious eye irritation

# WARNING

#### Precaution

Wash thoroughly after handling. Wear protective gloves/protective clothing/eye protection

IF ON SKIN: Wash with plenty of soap and water

IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical advice/attention

Take off contaminated clothing and wash before reuse
